‘Embedded with the troops’. Teaching academic writing from within subject modules: a short-lived luxury or the way forward?

Sarah Horrod, Kingston University

The presentation describes EAP input embedded into some MA Marketing modules in semester 1, 2012. No funding for the course next year... So, a 'short-lived luxury'? ‘The fragility of ESP initiatives’ (Swales et al. 2001, p455)

The Image: ‘Embedded with the troops’:
Access and being ‘in on the action’
Limitations of being ‘embedded’

Outline:
- The course: the immediate context; planned strategies to maximise effectiveness
- Constraints and limitations
- Feedback and reflection
- The wider context and the case for ESAP

The immediate context:
- Challenging MA Marketing programmes
- Drop in IELTS to 6.5 (now same as other programmes)
- Low attendance at In-sessional classes by weakest students
- Collaboration with Marketing lecturers already on credit modules

Other types of EAP course within the academic year:
- General ‘open’ In-sessional EAP classes
- ‘Faculty-specific’ In-sessional classes e.g. PG business students academic writing = Elements of CEM (contextualisation, embedded, mapping: Sloan and Porter 2010, p203), already:
  Embedded:
  - On students’ timetables
  - Presence at induction & diagnostic testing
  - Cooperation with staff
  Contextualised:
  - Specific to business: topics / ‘genres’ / sample writing
- Credit-bearing ESAP modules = all CEM elements incl. ‘mapping’ against student assignments

‘Embedded’ courses?
Use term ‘embedded’ for ‘special, commissioned’ courses for particular programme cohorts e.g.
- For PG design For UG computing For UG politics For PG science (Dissertation) For UG Social Work

The EAP input into MA Marketing programme modules – in semester one
Aims:
- Foreground importance of academic writing for success
- Help before first assignments
- Identify the weakest students
Confllicting?
Identifying ‘deficits’ VERSUS Promoting writing skills for all

EAP input – strategies to increase effectiveness:
- To identify weaker students: diagnostic writing in induction week
- Within a range of modules: cover different skills
- Some input and background info on VLE
- Class time focused on tasks: practise skills & further identify weaker students
- Tasks use assignment reading / titles / cases as basis of activities

Most successful input: smaller classes / focused on specific assignments or writing genres / not just an hour within subject teacher’s class / where had more time and control
Lessons learned:

1. Optionality
   • Give students choice to attend – L1 students / Not taking up module time / Not feeling rushed

2. Timing
   • Not at start of course – no perception of need / Near to assignment time

3. Focused on assignment / other useful tasks
   • Specifics of assignment / specifics of useful ‘genres’

4. Collaboration
   • Don’t assume teachers know what you need / Require total support throughout process / Should be on-going, dynamic process (see Barron, 2002)

5. Focus
   • Follow one module?

Constraints: total hours / timing within year / faculty decisions / conflicting and unrealistic aims / collaboration issues

Reasons to have embedded courses:

- Students’ perception of relevance / Mutual understanding / Awareness-raising of our expertise and what offer / Highlighting of importance of communication skills for university and work / Vehicle to direct students towards other courses and tutorials / Informing of future EAP courses in disciplines / Increasing acceptance of ESAP / disciplinary variation perspective (Hyland, 2002; Nesi and Gardner, 2012; Coffin and Donohue, 2012) / Rare to have credit-bearing ESAP modules

The wider context and its impact on EAP provision:

[Argument for specificity and embedding’(…) the interface between EAP and the wider cultural context of higher education’ (Turner, 2012, p19)

Influences on EAP provision: external providers / multiplicity of ‘support’ initiatives / funding issues / limited number of teachers / new academic frameworks i.e. with academic skills embedded into academic modules – subject teachers also teaching writing skills.

Embedding for success?:

- Specific to programmes / - Demonstrating our expertise in terms of:

a) understanding and teaching different discourses (developed through collaboration – but not content experts: see Belcher, 2006, p140)

b) and our expertise in language as a resource for communication in a variety of contexts (Turner, 2004)

Otherwise… what differentiates us?
